Subject index

Apparatus
– for crystallization of ammonium perchlorate 220
– for levitated containerless growth
– – of protein droplets 384

Computer simulation
– of crystal growth 178
– of effective mass theory growth
– – of chemical vapor deposition on diamond 353
– – of gallium selenide 331
– – of zinc selenide 331
– of heat transfer and radiation 321
– of solid–liquid interface 149
– of solute transport 133
Convection 43, 247, 263, 379, 406

Defects
– modification by laser irradiation
– – of cadmium telluride–mercury telluride 317
Dendritic growth
– of ice 138
– of nickel 406
– of succinonitrile 143
Device characterization
– electroluminescent displays 53
– electronic materials 317, 369
– heterojunctions 25
– lasers 25
– quantum wells 8, 25, 31
Diffusional control
– of beryllium in indium gallium arsenide 297
Dissolution of
– ammonium perchlorate 220

Electronic materials, see Device characterization
Epitaxy, see Thin film growth
Etching
– chemical 43, 286, 379
– gas 277
Eutectic growth, of
– aluminum copper 398
– binary systems 263

Heterojunctions, see Device characterization
Hydrodynamics, see Convection

Kinetics
– of growth 101, 109, 178, 214, 220, 292, 336, 353, 398, 426
– of interface control 138
– of nucleation 16, 109, 239

Lasers, see Device characterization
Lasers, crystals for
– gadolinium ytterbium gallium garnet 203
Lysozyme 384

Melt growth technique
– by Bridgman–Stockbarger method
– – of gallium antimonide 43, 149
– – theory of solidification 247
– by Czochralski method
– – of gadolinium ytterbium gallium garnet 203
– – of lanthanum strontium aluminum tantalate 209
– – of silicon 70, 76
– by edge-defined film-fed method
– – of potassium lithium niobate 379
– by floating zone method
– – of niobium dibromide 430
– – of silicon 76, 321
– – of thallium dibromide 430
– by micro-pulling down method
– – of potassium lithium niobate 374
– – of potassium lithium tantalate niobate 374
– by pressure
– – of succionitrile 143
– by self-seeding technique
– – of cadmium telluride 309
– – of cadmium zinc telluride 309
– by submerged heater method
– – of indium gallium antimonide 1
Microgravity, growth under
– of aluminum gallium arsenide 166
– of protein crystals 133
– of simulated conditions 384
– of succinonitrile 143
Morphological stability
– of L-isoleucine 228

0022-0248/98/$ – see front matter © 1998 Elsevier Science B.V. All rights reserved.
PII: S0022-0248(98)00923-3

– of molybdate 195
– of silicides 189

Nucleation
– of ethanol–hexanol vapor 239
– of ice 138
Numbers
– Peclet 398, 406
– Prandtl 406
– Rayleigh 247
– Reynolds 398

Quantum wells, see Device characterization

Solution growth technique
– by flux method
– – of molybdate 195
– by gel method
– – of octacalcium phosphate 125
– by low temperature method
– – of potassium dihydrogen phosphate 101, 109, 214
– theory of growth 214
Superlattices, multilayers
– of indium selenide/gallium selenide 331
– of silicon germanium/silicon 426
Surface energy determination
– of ionic crystals 156
– of solid–liquid interface of pivalic acid 119
Surface structure
– of diamond 353
– of gallium arsenide 277
– of silicon carbide 342

Thin film growth, epitaxy
– by electron beam deposition
– – of zinc sulphide 53
– by gas source molecular beam epitaxy
– – of indium aluminum arsenide 31
– – of indium gallium arsenide 31
– by hot wall epitaxy
– – of zinc sulphide 61
– by liquid phase epitaxy
– – of aluminum gallium arsenide 166
– – of zinc gallium arsenide 25
– by metalorganic molecular beam epitaxy
– – of aluminum gallium arsenide 161
– – of gallium arsenide 161
– – of indium gallium arsenide 161
– by molecular beam epitaxy
– – of indium gallium arsenide 297
– – of silicon 426
– – of silicon germanium 426
– – of zinc gallium arsenide 25
– – of zinc selenide 301
– by spray pyrolysis
– – of tin oxide 369
– by vapor diffusion
– – of zinc-doped lithium niobate 94
– by vapor phase epitaxy
– – through chemical vapor deposition
– – – of diamond 353
– – – of germanium 173
– – – of silicon carbide 342
– – through metalorganic chemical vapor deposition
– – – of aluminum arsenide 16
– – – of bismuth telluride 336
– – – of gallium arsenide 277, 286, 292
– – – of gallium indium phosphide 272
– – – of indium gallium arsenide phosphide 8

Vapor growth technique
– by chemical transport
– – of gallium nitride 37
– by evaporation and condensation
– – of lysozyme 384
– – of thaumatin 384
– by hot wall epitaxy
– – of platinum/magnesium oxide/silicon multilayers 89
– theory of transient binary nucleation 239
